- 📍 Viseu / Aveiro
- 🌐 [Skalin151](#)
- 🚗 Driver's License: B & B1

SKILLS

- Javascript & Typescript
- React.js & Node.js
- Flutter (Dart)
- MongoDB & PostgreSQL
- Docker & Git
- Cloud Computing (AWS)
- Kubernetes & CI/CD
- STL & Gcode (3d Printing/CAD)

LANGUAGES

- English (Fluent)
- Portuguese (Native)
- Spanish (Intermediate)

EDUCATION

- Bachelor's in Computer Engineering
- ESTGV | Viseu, Portugal
- GPA: 13.8 / 20.0

SUMMARY

Fullstack Developer with a Computer Engineering background, combining production web development with systems and infrastructure engineering. Skilled in React, TypeScript, and Node.js for application development, and Docker, Kubernetes, and CI/CD pipelines for deployment automation. Experienced in real-time systems, high-concurrency architecture, and self-hosted Linux infrastructure.

EXPERIENCE

Fullstack Engineer Intern - Viseu Hospital Bed Management System

February 2026 - July 2026 | Team of 3

- Reduced bed status latency by 30 percent, measured by dispatch time, by implementing WebSocket real-time sync over polling.
- Automated deployment pipeline, measured by zero-downtime releases, by building GitHub Actions CI/CD workflows for test and deploy.
- Validated system resilience, measured by concurrency benchmarks, by load-testing a Kubernetes cluster under simulated ward surge conditions.
- Enforced discharge forecast accuracy, measured by 24/48/72-hour timelines, by designing relational schema in Supabase PostgreSQL.
- Verified bed state transition logic, measured by automated test coverage, by writing Jest and Supertest integration suites.
- Streamlined sanitation workflow, measured by QR-scan cleaning throughput, by building the Flutter mobile sanitation app.

PROJECTS

Discord Bot & Web Dashboard | Discord.js, Node.js, MongoDB, Docker

- Served 2,500+ users across 15+ guilds, measured by 50,000+ commands executed, by architecting a production Discord bot.
- Sustained 99.8 percent uptime, measured by automated crash recovery, by deploying with PM2 and Docker containerization.
- Eliminated currency duplication risk, measured by zero transaction errors, by implementing MongoDB atomic operators and session locks.
- Safeguarded economy integrity, measured by full unit test coverage, by building Jest suites for RPG mechanics logic.

Self-Hosted Homelab Infrastructure | ZimaOS, Docker, Portainer, Tailscale

- Sustained 99.9 percent uptime across 15+ containers, measured by continuous monitoring, by administering a ZimaOS Linux server.
- Secured remote access, measured by zero exposed router ports, by deploying a Tailscale WireGuard mesh with exit-node routing.
- Guaranteed data recoverability, measured by verified restore drills, by scheduling encrypted Restic backup snapshots.

Steam Family Library Aggregator | JavaScript, Docker, REST API

- Prevented API throttling failures, measured by zero rate-limit errors, by implementing exponential backoff and token bucket throttling.

Educational Learning App (Softskills) | Flutter, Dart, Node.js, Firebase

- Delivered a cross-platform learning app, measured by full course-to-certificate lifecycle support, using Flutter and Firebase Auth.
